

# HI-TORQUE HYDRAULIC ROOT CUTTER

## PRODUCT DESCRIPTION

Southland Tool presents our **Hi-Torque Hydraulic Root Cutter Motor and Kit** for ripping out and chewing up roots.

### Features

The Hydraulic Motor is a high torque variable speed motor that generates the power to chew up and spit out roots.

Coupled with our High Quality, Laser Cut Hardened Root saws, we are able to provide a solution to your root cutting needs.

The Puma Kit S906K - 1 uses our new EZ-RootCutter Skids. These skids are Cage style that slip on and off the motor easily with 4 front screws and 2 rear bolts. They are lightweight, easy to carry and each is stamped with its size to take out the guess work.

The Skids are made of hardened spring steel and are available in sizes from 6" to 24". We offer special Super-Duty root saw blades for these larger lines.

**Each kit comes with a Tool Box, Motor, 1" Blade Hub, 4 Saws and 4 Skids, 6", 8", 10" and 12", Turn Tool Wrench and instructions.**
