

F.O.G. Nozzle™

This portable suction nozzle is the better, safer way to remove **Fats, Oils and Grease** from tanks and other similar storage containers

FEATURES & BENEFITS

- A quicker, easier way to remove the layer of scum and sludge on the surface or on the bottom of tanks used in wastewater treatment plants.
- Dual lateral handles with non-slip sleeves provide a comfortable, secure hold, without obstructing suction flow.
- Allows for safe, rigid control for the operator: The system stays stationary and won't whip or move around during use.
- Saves time and effort during the removal process: It can also be used to scrape residual material from the tank.

ADDITIONAL INFORMATION

- Made of durable materials: (3-inch) camlock fittings made of aluminum; handles made of steel, covered in black rubber; nozzle is PVC pipe (Schedule 40 or Schedule 80, for example).
- Nozzle length can vary; nozzle sections at different lengths can be provided for a certain cleaning job. It can be made to work with a 3-inch suction hose or any other commonly used diameter of suction hose.
- For hands-free tank cleaning, a holster to hold the suction nozzle can be mounted around or inside the tank being cleaned; holster can be mounted at various angles depending on the type of tank or other conditions.
- Other applications: It can be used at water-treatment facilities; for any truck that cleans out a restaurant grease trap; a truck extracting material from a portable toilet; spill-cleanup on land or in the ocean.

FOGS Nozzle in Use

A better and safer way to remove Fats, Oils, Grease and Scum (F.O.G.S.) from tanks and other similar storage containers.
